Project Design Phase-II
Data Flow Diagram & User Stories

Date	28 January 2026
Team ID	LTVIP2026TMIDS90862
Project Name	Prosperity Prognosticator: Machine Learning for Startup Success Prediction
Maximum Marks	4 Marks

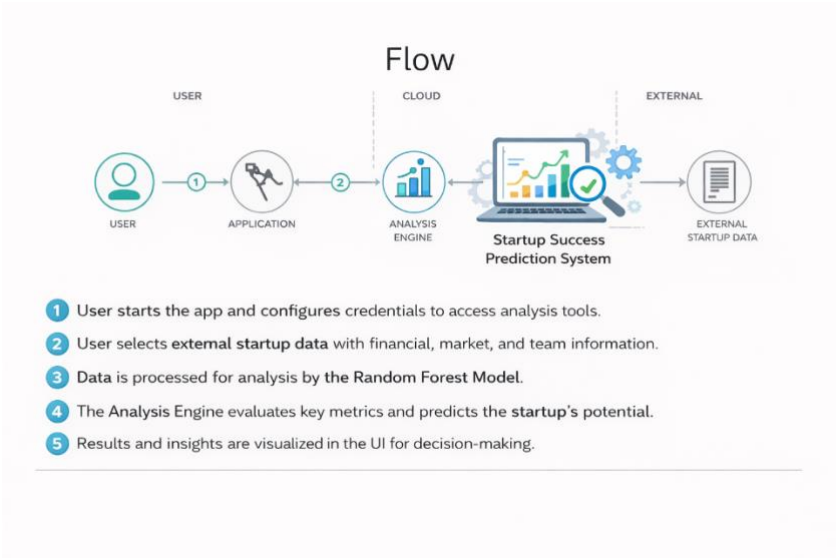
Data Flow Diagrams:

A Data Flow Diagram (DFD) is a graphical representation that illustrates how data moves through a system. It shows the input provided by the user, the processing performed by the system, data storage components, and the final output generated.

Example: **(Simplified)**

Example: DFD level 0(IndustryStandard)

Guidelines:
Include all the processes (As application logic / Machine Learning and Flask Technology Block)
Provide infrastructural demarcation (Local Flask Server / Cloud Deployment if applicable)
Indicate external interfaces (Python libraries such as Scikit-learn, Pandas, Joblib, etc.)
Indicate Data Storage components / services (CSV dataset files and saved .pkl model file)
Indicate interface to machine learning models (Integration of trained Random Forest model with Flask application)



User Stories

The following section lists the user stories for the Startup Success Prediction system

User Type: Investor / Entrepreneur (Web User)

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Investor / Entrepreneur	Registration	USN-1	As a user, I can register for the startup prediction system using email and password.	User account is successfully created and dashboard is accessible.	High	Sprint-1
Investor / Entrepreneur	Login	USN-2	As a user, I can log into the system using valid credentials.	User is redirected to the prediction dashboard after login.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Dataset Management	USN-6	As an admin, I can upload and manage startup datasets.	Dataset is stored successfully in the system.	High	Sprint-1
Administrator	Model Management	USN-7	As an admin, I can retrain or update the Random Forest model.	Updated model is saved and available for predictions.	Medium	Sprint-2
Investor / Entrepreneur	Startup Data Input	USN-3	As a user, I can enter startup details such as funding, team size, and market information.	System accepts valid input data for prediction.	High	Sprint-1
Investor / Entrepreneur	Prediction	USN-4	As a user, I can get prediction results indicating whether the startup will succeed or fail.	System displays prediction result with success/failure label.	High	Sprint-1
Investor / Entrepreneur	View Results	USN-5	As a user, I can view prediction probability and analysis summary.	Prediction probability score is displayed clearly.	Medium	Sprint-2
