Project Design Phase
Problem – Solution Fit Template

Date	1 February 2026
Team ID	LTVIP2026TMIDS90862
Project Name	Prosperity Prognosticator: Machine Learning for Startup Success Prediction
Maximum Marks	2 Marks

Problem – Solution Fit Template:

Problem–Solution Fit ensures that the identified problem of predicting startup success is effectively addressed by the proposed machine learning-based solution. Many investors, entrepreneurs, and policy makers face uncertainty in evaluating startup viability due to lack of data-driven insights.

The proposed Startup Success Prediction system solves this problem by analyzing historical startup data and providing predictive insights using machine learning algorithms. This helps stakeholders make informed decisions, reduce risk, and improve strategic planning.

Purpose:

- ❑ Provide a data-driven approach to evaluate startup success probability.
- ❑ Support investors in making informed investment decisions.
- ❑ Help entrepreneurs identify key success factors and reduce risks.
- ❑ Assist policy makers in designing better startup support initiatives.
- ❑ Improve decision-making through predictive analytics and model-based insights.

Template:

1. CUSTOMER SEGMENT(S) — CS

Who are your customers?

- Investors evaluating startup opportunities
- Entrepreneurs planning new ventures
- Venture Capital firms
- Financial analysts
- Policymakers supporting startup ecosystems

6. CUSTOMER CONSTRAINTS — CC

What coliuates nas presention reseitions from taking action or jimit their chosite. or soliubler? I.L. spenting penert tucbget for ctait rowatch, connection, available devices.

5. AVAILABLE SOLUTIONS — AS

When, jobs thos uee evaluatiab atiive customers when they face the problem, or shed to get the job dcots, when haze the tnep in thir tatm inetonaurs a cwee do tinne scriuttions wihen in sant and prgtar is on ehamdave ts digrial nccusating

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs-to-be-done (ent) Address for your customers?

- Predict whether a startup will succeed or fail
- Reduce financial investment risk
- Analyze startup performance indicators
- Make data-driven investment decisions

6. CUSTOMER CONSTRAINTS — CC

- Limited eccess to reliable startup data
- Time-constraints in evaluating multri pile startups
- Risk of biased or incomplete analysis
- Lack of technical prediction tools

3. TRIGGERS — TR

What triggers customers to act?

e.g. sterege thir neighte to ustome e tg. enylts their neighbor installing solar panels, reading about a more effectent olution is in the news.

- High investment risk in startups
- Need for reliable evaluation tools
- Market competition and uncertiaity
- Demand for objective, data-based insights

10. YOUR SOLUTION — SL

Develop a machine learning-based startup success prediction system

- Develop a machine learning-based startup success
  - Use Random Forest algorithm for classification
  - Provide probability-based prediction results
  - Offer web-based interface for easy user interac-

7. BEHAVIOUR — BE

What does bayers do to do the tnetum & do get the job done?

- Review startup pitch decks
- Analyze funding history
- Market trend analysis
- Review startup pitch decks
- Compare industry competitors
- Consult experts before investing

3. TRIGGERS — TR

What triggers customers to act?

e.g. stemge thir rifate startig snattities yon I leading mulling solar panels, reading about a more ostoment saoluaton in the hernew...

- High investment risk in startups
- Need for reliable evaluation tools
- Market competition and uncertainty
- Demand for objective, data-based insights

9. PROBLEM ROOT CAUSE — RC

What is the main reason this problerm exists?

- Lack of structured prediction models
- Overreliance on intuition
- Inconsistent data evaluation methods
- Absence of automated ML-based tools

7. BEHAVIOUR — BE

What, ch oige betwn or uattors problem and get the job done?

- ONLINE
- Startup databases
- Financial news portals
- Investment platforms
- Investor meetings
- Business conferences
- Startup networking events

4. EMOTIONS: BEFORE / AFTER — EM

How do customers feel when they face e a problem or a job and afterward?

e.g. lost, insecure - confidare: in control -- use it in your communication strategy & design.

Before using system:

- Uncertain about investment outcomes
- Fear of financial loss
- Confused due to incomplete data

10. YOUR SOLUTION — SL

Develop a machine learning-based startup success prediction system

- Develop a machine learning-based dasssarts
- Use Random Forest algorithm for classification
- Provide probability-based prediction results
- Offer web-based interface for easy user interaction

8. CHANNELS of BEHAVIOUR — CH

- ONLINE
- Startup databases
- Financial news portals
- Investment platforms
- Investor meetings
- Business conferences
- Startup networking events
