Project Design Phase
Solution Architecture

Date	5 February 2026
Team ID	LTVIP2026TMIDS90862
Project Name	Prosperity Prognosticator: Machine Learning for Startup Success Prediction
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture defines the overall structure of the Startup Success Prediction system and explains how the business problem is addressed using technology. It connects the problem of startup uncertainty with a Machine Learning-based web solution. Its goals are to:

- Identify an effective Machine Learning model to predict startup success.
- Describe the structure and components of the system including the web interface, backend logic, and trained model.
- Define system features such as data input, preprocessing, prediction generation, and result display.
- Provide a clear framework for development, deployment, and integration using Flask and Scikit-learn.

Example - Solution Architecture Diagram:
